THE FIRST FIVE MINUTES, AND NOBODY TYPED A THING

What a sales rep's software should already know by the time they open it.

> **Every field a human must type sits at 0 to 15 percent filled. Every field a machine writes sits at 50 to 100 percent.**

MEASURED AGAINST LIVE PRODUCTION, 15 AUGUST 2026. 11 USERS, NINE MONTHS OF HISTORY.

ASKED A HUMAN TO TYPE IT

FIELD	FILLED
The back planned deadline chain	0 of 136
In hands date confirmed firm	0 of 136
Expected delivery on a purchase order	0 of 89
Who has the ball right now	2 of 136
Is this job a rush	1 of 136

Nobody was lazy. Nine months of a working team, and the answer was still nearly zero.

A MACHINE WROTE IT INSTEAD

FIELD	FILLED
Proof decisions closed out	**87 of 89**
Job links absorbed off a shared link	**71 of 136**
Art requests opened from a chat post	**117 rows**
Activity logged against a record	**1,808 rows**
Queued work the system ran itself	**4,000 rows**

Same team, same nine months. The only difference was whether it asked anybody for anything.

WHAT A REP ACTUALLY DOES

01	Forward the email you were going to forward anyway	DEAL OPENS
02	Post the update in the channel you already post in	JOB FILES ITSELF
03	Paste the link you already send the client	QUOTE ABSORBED
04	Say yes or no to a proof	PRODUCTION STARTS
05	Answer four questions about a stale deal	PIPELINE STAYS TRUE

That is the whole list. There is no sixth thing.

LOGGING ONE NEW JOB

THE OLD WAY

9 fields

Open the record, retype the company, the contact, the date, the quantity, the ship to, the notes. Then remember to come back and close it.

NOW

1 forward

The email you already sent becomes the deal, the contact and the first activity line. You were copied on it anyway.

The sender is read as a person at a company, never as the company itself.

PROOF LOOP, FIRST WEEK

98%

of proof decisions closed out, at a six minute median, with no training session and no reminder email.

The mockup suite it replaced died at zero rows across six tables. Same team. Same month.

WHERE A REP LIVES

/	Pipeline board, deals by stage with days in stage on the card	DAILY
/	Projects, brief through delivered, with the message thread on the job	DAILY
/	Clients and contacts, with the reorder radar calling last year's list	DAILY
/	One search across every record type	DAILY
/	A phone surface built for capture, not a shrunken desktop	FIELD

Quotes, invoices and purchase orders sit one click off the same record.

WHAT IT WILL NOT DO

Six systems in here write email. Not one of them can send on its own.

It will not invent a delivery date it was never told. Zero of the recorded shipments carry a carrier ETA, so the risk engine stays quiet instead of guessing. I would rather it say nothing than say Tuesday.

THERE IS NO SIGN UP BUTTON

Access is by request, and I will show it against your own channels rather than a slide.
