FIVE QUESTIONS, ANSWERED BEFORE YOU ASK THEM

What the person who owns the shop can see without calling a meeting.

WHAT AN OWNER ASKS ON A MONDAY

01	What is actually in the pipeline, not what somebody remembers	PIPELINE
02	Which jobs are late, and who is waiting on whom	PROJECTS
03	What closed this time last year and never came back	REORDER RADAR
04	Which deals have gone quiet and nobody has admitted it	HYGIENE SWEEP
05	What my team did all week without asking them to report it	ACTIVITY

Five questions that used to be five conversations.

ONE DATABASE, READ THIS MORNING

136
DEALS

196
PRODUCTION PROJECTS

241
ORGANIZATIONS

1,808
LOGGED ACTIVITIES

4,000
QUEUED JOBS IT RAN ITSELF

11
PEOPLE USING IT DAILY

Counted against live production on 15 August 2026, not estimated from the schema.

> **A feature only ships if it can fill its own fields. If it needs somebody to type, it lands at zero and stays there.**

THE ADOPTION LAW. IT KILLED A NINE WEEK ROADMAP IN ONE AFTERNOON.

Four of five recommended modules were rejected on this test alone.

THE PIPELINE STAYS HONEST

THE USUAL

A guess

A board full of open deals, half of them dead, nobody willing to be the one who closes somebody else's.

EVERY 14 DAYS

4 answers

Still alive, nothing changed, dead, or too late. Every answer writes a real record. It is short and it is mandatory.

The value of a clean pipeline is that the number at the top means something.

THE OWNER SURFACES

/	Insights, revenue and commissions over the same records the reps work in	REPORTING
/	Team settings, invite, suspend, reinstate, force a logout, reset a second factor	CONTROL
/	Admin control center, platform statistics, record merging, data export	CONTROL
/	Demo mode, a parallel empty database for showing the software to a prospect	SELLING
/	Per client portal control, set the password, copy the link, switch it off	CLIENT ACCESS

A new hire is a database row now, not a deployment.

SHIPMENTS CARRYING A CARRIER ETA

0

of 17 recorded shipments. So the delivery risk engine says nothing rather than inventing a date.

One carrier is not entitled on the account, and the rate service cannot see roughly four in five of our shipments. That is an integration to buy, not a feature to fake.

WHAT IS REAL TODAY

SURFACE	STATE
Pipeline, projects, clients, tracking, search	**daily use**
Quotes, invoices, purchase orders, warehouse	**built, light use**
Mockup studio, outreach, reporting	**built, light use**
Client portal, reorder shop	**not yet handed over**
Line item economics	**absorption work, unscoped**

Maturity here is honest rather than promotional. The open items are on the page too.

WHAT I WILL TELL YOU FIRST

The data richness comes from absorbing what your team already sends. A shop on a different system installs this and gets an empty database.

So the honest market today is narrow and specific, and the roadmap is one absorption adapter per system rather than more modules. I would rather say that out loud than sell you a pilot that starves.

REQUEST ACCESS, NOT A TRIAL

I will run it against your own channels and show you the fill rates on your own data before anybody signs anything.
