PAID IS NOT DONE. DELIVERED IS NOT DONE EITHER.

The box arrived on time and
I still had no idea whether
the client was happy.

A JOB THAT WAS FINISHED, DELIVERED AND PAID

It sat open on our board for weeks. Nobody forgot on purpose. There was simply no moment in anybody's day that said this one is over now.

The money had landed. The board still showed it as work.

WHERE JOBS GO TO DIE QUIETLY

PAID

Still open

Accounting is satisfied, the board is not updated, and the rep has moved on to the next fire.

DELIVERED

Still unknown

The tracking says delivered. Nobody has asked a human being whether the thing was right.

Two different endings, both of them treated as the same word.

WHAT CLOSES A JOB NOW

01	Delivery lands and the job stops asking for attention	AUTOMATIC
02	A week later the system drafts one short message	AUTOMATIC
03	I read it, change a word, and press send	HUMAN
04	The answer gets filed against the job, not my inbox	AUTOMATIC
05	Only then does the job read as closed	AUTOMATIC

Four of the five steps ask nothing of anybody. Step three is the whole job.

WHAT THE HUMAN HAS TO DO

1

press of send, on a message that is already written and already knows which job it is about.

Every field this loop needs is a field a machine already fills. That is the only reason it will still be running in six months.

> **If a step in your process depends on somebody feeling like it, that step does not exist. Write it down as not existing.**

MEASURED VERSION: EVERY FIELD A HUMAN MUST TYPE HERE SITS BETWEEN 0 AND 15 PERCENT FILLED.

YOU CAN RUN THIS WITHOUT SOFTWARE

Pick your last twenty delivered jobs. Count how many of them you actually know the outcome of. Not the tracking status, the outcome.

Then ask what would have had to happen for you to know. In most shops it is one message, a week late, that nobody owns.

SEE THE LOOP ON YOUR OWN JOBS

Access is by request rather than a signup button, and I will show it against your own channels.

NOTHING SENDS ITSELF

FILED AGAINST THE JOB

BUILT BY A WORKING REP
